

Environmental Policy Statement

Imagination subscribes to the environmental management system ISO 14001:2015 to a degree appropriate to the nature and scale of its organisation and global activities.

Management and staff acknowledge the importance of preventing pollution, principally by identifying and working to minimise the environmental impact of the company's offices, facilities and functions.

The philosophy of reusing and recycling (as opposed to disposal) also informs our work for clients. We seek to optimise the resources utilised in communication, design and event management by adopting operational technologies and practises as required.

We comply with all relevant legislation and standards; we look to sustain the continuous improvement of our performance by establishing and reviewing environmental targets on a regular basis.

In addition to communicating this policy throughout our organisation, we actively solicit the support of clients, contractors and suppliers, working to raise awareness of our collective responsibility for the environment and our quality of life.
